

Evacuation training

Fire/emergency evacuation training for nominated persons using evacuation lifts

Contrary to popular belief, many types of lifts, including firefighting lifts, can be used to evacuate persons of limited mobility in the event of a fire. This course enables nominated persons to use designated lifts to evacuate personnel during an emergency.

COURSE OUTLINE

- Site specific procedures in the event of a fire or emergency evacuation.
- How mobility impairments impact the ability of visitors and staff to quickly and safely evacuate the building in an emergency.
- Lift operations and procedures.
- Practical demonstration and explanation.
- Debrief and questions.

The course is held on the client's site in accordance with the fire response risk assessment and procedure for the premises so that candidates are trained on the lift equipment they will use in the event of a fire or emergency evacuation. Each candidate receives a certificate of competency along with documentation giving clear instructions on rescue procedures applicable to the lift equipment on site.
